

Janaka Premathilaka

Senior Java Engineer & Solution Architect

Banking Systems · AI Integration · Model Context Protocol

Address	Zug 6300, Switzerland	Date of birth	15.02.1980
Phone	+41 76 224 84 45	Nationality	Belgian (Swiss C permit)
Email	janaka2@gmail.com	Availability	2 months' notice
LinkedIn	in/janakapremathilaka	On-call (Pikett)	Yes
GitHub	github.com/Janaka2	Web	janaka.me

PROFESSIONAL PROFILE

Senior Full-Stack Java Engineer and tech lead with 22+ years building mission-critical, regulated banking systems for UBS, Credit Suisse, the European Commission and Union Bank of Colombo. Owned six enterprise applications through the Credit Suisse–UBS merger and delivered audited archiving on time. Since 2023, bringing LLM, RAG and agentic automation into regulated environments, including local model inference where data cannot leave the bank, and integrating agents with existing Java services through the Model Context Protocol (MCP). Daily practitioner of AI-assisted engineering with Claude Code and OpenAI Codex, held to line-by-line review. Strong advocate of TDD, observability and mentoring in Agile/SAFe environments. Fully available for application support and on-call duties (Pikettendienst).

PROFESSIONAL EXPERIENCE

01.2024 – present Zurich, Switzerland	Senior Full-Stack Solution Engineer (Lead) UBS / Cognizant • Took full ownership of six complex enterprise applications during the Credit Suisse–UBS merger, ensuring system stability and zero operational interruptions. • Led a high-pressure application-archiving initiative to 100% on-time delivery under audit-grade deadlines; engineered Linux + Oracle CLI extraction pipelines for multi-gigabyte regulated data feeds. • Designed and shipped LLM and agentic-RAG automations for internal banking workflows, integrated with existing Java services; ran local Llama 3 inference for data that cannot leave the bank’s perimeter. • Built MCP (Model Context Protocol) servers and clients so agents reach internal services through governed, allow-listed tools with audit logging, instead of ad-hoc function calling. • Introduced AI-assisted delivery with Claude Code and OpenAI Codex: specification-first, generate-and-review loops, every change explained and tested before merge. • Technical driver for standardisation: mentoring junior engineers, leading code reviews, holding the line on testing, observability and reliability; full on-call (Pikett) participation and production incident management. Stack: Java 17, Spring Boot, Kafka, Oracle, OpenShift/Kubernetes, Splunk, Grafana, Jenkins, n8n, LangChain, LangGraph, LlamaIndex, RAG/CAG, MCP, Claude Code, OpenAI Codex, local + API LLMs
05.2019 – 01.2024 Zurich, Switzerland (remote from the UK 2019–2020)	IT Solution Developer Credit Suisse / Cognizant • Took 100% ownership of the end-to-end design, development and deployment of a mission-critical Master Data Management (MDM) tool, the golden data source feeding big-data endpoints for advanced search and reporting. • Spearheaded the greenfield Client Lifecycle Management and Event Management suite; architected and delivered three robust, scalable cloud-native applications (Spring Boot, React, Oracle, microservices). • Engineered a scalable, low-latency Front-Office FX trading platform (Java 11–17), improving responsiveness by about 20% through multithreading and memory tuning. • Independently established the complete CI/CD pipeline for the MDM tool and adopted Angular to deliver its UI. • Fostered DevOps culture (Kubernetes, Docker, Splunk, Grafana); championed TDD with JUnit and Mockito in a Scrum setup. Stack: Java 11–17, Spring Boot, Spring Data, React, GraphQL, Kafka, Liquibase, Oracle/PL-SQL, OpenShift, Kubernetes, Helm, Jenkins, Splunk, Grafana

01.2018 – 05.2019 Zurich, Switzerland	IT Solution Development Specialist UBS / Cognizant • Modernised 20+ legacy components into Spring Boot microservices, factoring non-functional requirements into robust solution architectures. • Automated delivery pipelines with Jenkins (static analysis, deployments, custom reporting); migrated the codebase from SVN to Git. • Strengthened testing with JUnit, integration tests and Cucumber BDD, ensuring high functional and technical quality before deployment.
06.2011 – 01.2018 Brussels, Belgium	Senior Full-Stack Java Developer European Commission (DIGIT) • Engineered and maintained the EU’s core e-procurement system, mission-critical, multi-language and public-sector, over a 6.5-year tenure. • Built distributed integration flows with Spring Integration and implemented jBPM workflows for complex approvals, escalations and audit trails. • Delivered front-end and back-end across the stack (Angular, Spring/Hibernate, EJB3, Oracle, WebLogic); owned releases and provided L3 production support.
05.2004 – 06.2011 Belgium & Sri Lanka	Senior Java/JEE Consultant & Engineer Johnson & Johnson, Nokia Siemens, Union Bank of Colombo, and others • Core technical consultant across healthcare, telecom, banking and e-commerce, designing and implementing enterprise-grade Java/JEE solutions. • Union Bank of Colombo: built core banking modules, including the loan system, lease-schedule generator and cheque and passbook printing (EJB2, JSP, DB2 on AS/400). • Modernised architectures in Agile/Scrum settings, integrating SOAP/REST web services and optimising Oracle/MySQL database interactions.

EDUCATION & CERTIFICATIONS

1999 – 2004 Sri Lanka	BSc in Computer Science, Statistics & Mathematics University of Sri Jayewardenepura • Sun Certified Enterprise Architect (SCEA); also SCJP and SCBCD. • Spring Certified Professional, in progress (2026).
--------------------------	---

TECHNICAL SKILLS & LANGUAGES

Languages: Java (11–17), SQL, TypeScript, Python AI / LLM engineering: LangChain, LangGraph, LlamaIndex, CrewAI, AutoGen, OpenAI Agents SDK, RAG/CAG patterns, agentic workflows (n8n), local LLM inference (Llama 3), prompt and parameter tuning, evaluation Agent integration: Model Context Protocol (MCP) servers and clients, tool allow-listing, audit logging, Spring AI AI-assisted engineering: Claude Code, OpenAI Codex, specification-first and review-gated delivery Architecture: Microservices, solution architecture, event-driven (Kafka), multithreading, GraphQL, REST Frameworks: Spring Boot, Hibernate, React, Angular DevOps & cloud: Kubernetes/OpenShift, Docker, Jenkins, Grafana, Splunk Testing & agile: TDD, JUnit, Mockito, Cucumber, Jira, Scrum/SAFe	English — full professional (C1/C2) German — intermediate (B1), improving French & Dutch — basic knowledge Sinhalese — native
